URUK SMART CITY MONITORING AND MANAGEMENT SYSTEM

By combining smart city solutions in a single management system, it is ensured that all data belonging to the city are monitored, analyzed and interpreted for data-based strategic planning. Hereby, cities are digitized and resources are effectively used in order to increase the life quality of citizens and achieve sustainable city management.

All functional capabilities required by smart city technology are brought together in the URUK Smart City Monitoring and Management System:

- Easy integration
- Data model-based interoperability
- Scalability
- Cyber security
