ACTIVE PROTECTION SYSTEM

AKKOR, equipped with both hard kill and soft kill functionalities as an Electronic Warfare (EW) Self Protection Suit, provides complete protection against all kinds of anti-tank missiles and rockets for the armored vehicles with an optimum time and the safest distance range from the platform.

With 360 degree full protection coverage against not only conventional but also asymmetric threats in the operational environment of main battle tanks, AKKOR has also the capability to be integrated on various types of armored vehicles.

System Components

Hard-Kill Capability Components

- Very High Resolution Hard-Kill Radar
- High Speed Hard-Kill Launcher
- Smart Hard-Kill Munition
- Hard Kill Control Panel

Soft-Kill Capability Components

- Laser Warning Sub-System
- Multispectral Soft-Kill Munitions
- Soft-Kill Launchers
- Soft Kill Control Panel

Suit Components

- EW Computer

System Features

- Full active protection suit having both hard-kill and soft-kill capabilities with integrated functionality
- Effective against top attack and fly over threats
- 360 degree full protection coverage against threats from all directions
- Fully operational under severe environmental conditions of main battle tanks such as dust, mud, rain, snow, fog thanks to the fully RF, optics-free hard-kill solution
- Very fast system reaction against low-range asymmetric threats.
- Fully operational to multiple simultaneous threats
- Provides protection against all types of laser guided missiles and thermal visioning systems by means of effectively generated multispectral smoke screen
- Integration capability to multiple vehicle types
- Low collateral damage by means of the direct-reaction-to-threat feature, provided by very high resolution hard-kill radar and smart hard-kill munition solution
