Water Efficiency Policy

We believe that we can grow together with our entire value chain and the immediate circle in which we work, with the awareness of our impacts and responsibilities in social and environmental areas and the awareness of adding value to our society. While we achieve the highest possible quality in all our operations, we consider "water", on which our operations have no dependency and we have little impact, just like all our other environmental issues, and we consider water as our future and adopt its protection as our common duty.

In this context, we are committed to;

- Comply with legal and other requirements in defining and managing our water risks, taking into account the water aspects and impacts of our activities, products and services,
- Carefully monitor national and international water sustainability programs, to meet applicable water efficiency requirements, to follow sustainable development goals and to create sustainability added value at the highest level,
- Monitor water consumption to mitigate the effects of global climate change, to carry out efficiency studies and to report transparently,
- Ensure the efficient use and quality protection of water resources,
- Review, maintain and continuously improve system performance with the leadership of senior management and the participation of employees in line with water efficiency targets,
- Support access to water and sanitation in the context of human and environmental rights, starting with the immediate environment in which we work,
- Adopt the support of water efficiency principles in our products, services and designs as a basic principle in order to keep our water efficiency performance at the highest level,
- Create a strong awareness of water consumption under the leadership of senior management, taking into account the needs and expectations of the relevant parties and contributing to the implementation and development of the entire value chain,
- Ensure that employees have a good water awareness and that our water policy is adopted by all employees as a shared responsibility,
- Consider water as a trust to be passed on to future generations.
