## WATER POLICY

In addition to our economic and corporate responsibilities, we believe that we can grow together with our entire value chain and our immediate circle, with the awareness of our impact and responsibilities in the social and environmental fields and the awareness of adding value to our society. While attaining the best possible quality in every work, we treat "water", which our activities have no dependency on and our impact on, as all our other environmental issues, and consider water as our future and adopt it as our common duty to protect it.

Within this scope, we are committed to;

- Complying with legal and other requirements in determining and managing our water risks, taking into account the water dimensions and effects of our activities, products and services,
- Carefully monitoring the sustainability programs developed in the national and international arena related to water, following the sustainability goals and creating the added value of sustainability at the highest level,
- Monitoring water consumption and reporting transparently in order to reduce the effects of global climate change,
- Ensuring the efficient use of water resources and preserving its quality,
- Improving the system performance and ensuring its continuity with the leadership of the senior management and the participation of the employees in line with the water objectives,
- Supporting access to water and sanitary conditions in the context of human and environmental rights, starting from our immediate circle,
- Creating a strong awareness of water consumption that contributes to the implementation and development of the entire value chain, taking into account the needs and expectations of the relevant parties, under the leadership of the senior management,
- Ensuring that our employees have a good water awareness and that our water policy is adopted as a common responsibility by all employees,
- Treating water as a trust to be passed on to future generations.

**Prof. Dr. Haluk GÖRGÜN**  
*Chairman of the Board and General Manager*
