

# MULTI MISSION 35MM WEAPON SYSTEM

# MULTI MISSION 35MM WEAPON SYSTEM

Multi Mission 35mm Weapon System is designed for naval platforms which capable of usage of 35mm AIR BURST AMMUNITION (ATOM). Through this capability, the system is highly efficient against **small-mini UAVs, helicopters, asymmetrical threats and ground targets.**

System offers comprehensive and cost effective system solution thanks to its integrated electro-optic surveillance system, remote command capability, Linkless Ammunition Feeding Mechanism and flexible sensor integration infrastructure.

## General Features

- Multi-purpose usage against air, surface and ground threats.
- Target detection and precise tracking with Integrated Precision Stabilized Mechanism
- Adjustable Detecting/Tracking algorithms and gun firing speed for the target set (60-550 rounds per minute)
- Linkless Ammunition Feeding Mechanism
- Suitable for using with different 35mm ammunition types (TP-T, HEI, ATOM, ATOM-AntiUAV)
- Ability to integration with Combat Management System
- -15 / +85 degree movement capability on the elevation axis
- Nx360 degree movement capability on the traverse axis
- Integration capability without deck penetration
