“GOKKUBBE”**Cutting-Edge Ground-Based Air Defense (GBAD) System with
Unmatched Air Defense Proficiency**

In the dynamic domain of air warfare, the past decade has witnessed a sophisticated evolution of air threats, meticulously designed to outmaneuver Ground-Based Air Defense (GBAD) systems employed by adversaries. Not only have these air threats undergone technological advancements, but their range and diversity have also expanded significantly. Certain formidable threats, once confined to the field of conventional forces, have now become more accessible and affordable to asymmetric enemy groups. This rapidly changing landscape presents a daunting challenge in ensuring tactical dominance across the entire spectrum of air threats, particularly for safeguarding critical infrastructures.

To effectively counter these multifaceted challenges, the new generation of GBAD systems must possess capabilities specifically tailored to address the intricacies of each threat, while maintaining a flexible and modular architecture. The key lies in the seamless integration and adaptive utilization of various sensors and effectors, thereby creating a self-multi-layered defense system capable of countering both symmetric and asymmetric threats with utmost precision and efficiency.

In light of these imperatives, ASELSAN introduces GOKKUBBE, a cutting-edge GBAD system meticulously engineered to provide an optimal and modular air defense solution. GOKKUBBE is designed to counter existing air threats, including RAM (Rocket, Artillery and Mortar), while also future-proofing against emerging challenges. Its strategic focus revolves around safeguarding high-value stationary assets, such as military bases and critical civil infrastructures, ensuring their utmost protection against a broad array of air threats. With its state-of-the-art capabilities and unwavering commitment to excellence, GOKKUBBE emerges as an exemplar of defense, empowering security forces with unmatched air defense proficiency.

About ASELSAN:

As a global technology leader, we have established an organization that delivers new experiences to our users all across the world. By investing into our highly diversified human asset, we keep growing in a sustainable and inspiring fashion.

A journey began with a radio communication device today took us to more than 500 various products and solutions that changed “status quo ante” in defense and security arena. Our ambitious global expansion strategy made us embracing investment opportunities in promising markets.

With the inspiration of our clients in more than 80 countries, we start every new day with new ideas and dreams that encourages us to challenge technology boundaries. Striving for a better planet is our endless motivation.

Note: For more information regarding the product, please visit our booth at the IDEF 2023.
